

# The Level of Educational Management System in Teacher Education Field

V.Ramarajan

M.Phil Scholar, Joseph And Science College, Thirunavalur, Tamilnadu, India

**Abstract:** The process of receiving or giving systematic instruction, especially at a school or university. Education is the process of facilitating learning, or the acquisition of knowledge, skills, values, beliefs, and habits. Educational methods include storytelling, discussion, teaching, training, and directed research. Education frequently takes place under the guidance of educators, but learners may also educate themselves. Education can take place in formal or informal settings and any experience that has a formative effect on the way one thinks, feels, or acts may be considered educational. The methodology of teaching is called pedagogy.

## I. EDUCATIONAL MANAGEMENT

Educational management, also sometimes known as educational administration, is commonly associated with elementary and secondary schools as well as institutes of higher learning like colleges and universities. Educational management professionals can also be found working in governmental agencies, private companies, and not-for-profit organizations. Those working in educational management might act as policy-makers, researchers, or consultants to help evaluate and develop ways to enrich and enhance the educational system at all levels. Most educational management professionals have earned at least a master's degree and many are licensed teachers or principals.

## II. REQUIRED EDUCATION

Those interested in an educational management career will likely need to complete a master's or doctoral degree program. Some of these programs are intended specifically for public education teachers and administrators; however, completing a teacher education program is not a requirement for enrollment in some educational management programs. You can also find educational management programs that focus on preparation for careers in higher education. Master's degree programs might require completion of a thesis project and internship. Doctoral programs generally require a dissertation based on original research.

## III. COMMON COURSEWORK

The core coursework in educational management degree programs varies slightly from program to program. Listed below are some common courses that you can expect to encounter in a graduate-level educational management program:

- Education economics
- Education legislation
- Public policy and education

- Management of educational organizations
- Evaluation of educational systems

## IV. LICENSURE

Education managers who work in school administration, usually as principals, are required to be licensed in most states, if they work at public schools. Requirements vary, but they often include a master's degree and additional training. Sometimes continuing education is needed to maintain licensure. Private schools do not require licensure.

## V. JOB SKILLS

Leadership skills are a must in this field. Professionals working in education management must also have good decision-making and problem-solving skills. They should also be good communicators and be comfortable working with teachers, parents, and children, as well as other community members.

## VI. OCCUPATIONAL STATISTICS

The BLS indicates that job opportunities might increase due to a need to replace retiring professionals. Additionally, the advanced educational requirements for many positions might deter some from pursuing openings in the field, making positions more readily available to those who do hold the necessary degrees.

## CONCLUSION

The process of receiving or giving systematic instruction, especially at a school or university. **Education** is the process of facilitating learning, or the acquisition of knowledge, skills, values, beliefs, and habits. Educational methods include storytelling, discussion, teaching, training, and directed research. Education frequently takes place under the guidance of educators, but learners may also educate themselves. Education can take place in formal or informal settings and any experience that has a formative effect on the way one thinks, feels, or acts may be considered educational. The methodology of teaching is called pedagogy.
