Research on The Integration of Labor Education into the Teaching Path of Professional Courses in Colleges and Universities

Huilan Yue
Teacher Education School, Hu Zhou University, Huzhou, China

Abstract: In the teaching of vocational practice training courses, teachers should run through the whole process of labor education, so that students have the original intention of labor, devote themselves to labor, feel the happiness brought by labor, and then cultivate students' comprehensive quality. The organic penetration of labor education in course teaching is an indispensable part of the "five educations" of university education, and it has a high degree of fit with the OBE education concept that emphasizes "output orientation". In the implementation of labor education, we must pay attention to the simultaneous implementation of "knowledge" and "action", so as to cultivate students' ideas and improve their practical ability. It is also helpful for the cultivation of students' working spirit and the improvement of ideological and moral quality. This article takes the connotation of labor education and the function of education as the breakthrough point, analyzes the importance and current situation of labor education in the process of ideological and political education in technical colleges and universities, and develops specific strategies for integrating labor education into ideological and political education in technical colleges and universities.

Keywords: Labor Education, Teaching Path, Professional Courses

I. INTRODUCTION

Labor is not only a method of survival, but also the spiritual foundation of one's own most meaningful life. In the teaching of vocational practice training courses, teachers should run through labor education throughout the whole process, give full play to the role of labor education, and integrate the deep connotation of labor education into the growth and development of students. Labor education is an important part of the national education system. The combination of education and labor to carry out practical teaching has a unique educational value, and is a key condition for contemporary college students to cultivate morality, enhance intelligence, strengthen physical fitness and aesthetic education. For a long time, colleges and universities have focused on carrying out labor education through practice, allowing students to experience the labor process. With the proposal of the national fitness slogan, the public attaches great importance to physical quality.

The practice of labor education can improve the physical quality of students to a certain extent. At this stage, students' outlook on life, values and world outlook are gradually developing, so students need positive cultural thinking to guide themselves to establish correct ideas. Only in this way can students strengthen the cultivation of the Marxist labor concept and labor spirit. This requires that certain teaching design principles must be followed to systematically build an education and teaching system in which labor education is integrated into ideological and political theory courses. At this stage, labor in labor education is different from labor in the conventional sense. In the actual education process, labor education is a certain labor significance, which is based on the mental and physical labor of college students. Labor education pays more attention to production and education activities at the level of humanistic spirit.

Labor refers to the purposeful activities that people use certain production tools to act on labor objects to create material wealth and spiritual wealth. At present, "post-00s" have become the main body of contemporary college students. Under the influence of multiple factors such as society, school, family, and individual, there are still many problems to be solved in the cultivation of the labor spirit of contemporary college students in my country. In order to cultivate a new generation of professional and technical personnel with comprehensive development for the country and society. This article discusses the integration of labor education into the teaching of higher vocational practice training courses from several aspects. Make practical education more effective. At the same time, it should be noted that some college students still do not want to work, do not know how to work, and do not cherish the fruits of their labor. The enthusiasm and consciousness of actively participating in labor education are not enough. In this regard, it is necessary to integrate the forces of family, school, and society to cultivate students' good quality.

Labor education plays a very important role in cultivating the spirit and quality of contemporary youth. Schools and teachers must pay full attention to labor education and fully penetrate labor education teaching and practice. In the process of teaching in technical colleges, we must take educating people as a very important link to fully tap students' innovative thinking in the teaching process and help students improve their own quality. Thought is the precursor of action. Reasonable design and effective integration of labor education related content in the education and teaching of ideological and political theory courses in higher vocational colleges, guide students to establish a Marxist labor view, carry forward the labor spirit of the new era, adhere to the socialist labor value orientation, activate labor enthusiasm, and improve labor skills and literacy. Labor education in technical colleges.

II. THE PROPOSED METHODOLOGY

Mainly based on the learning objectives of the current semester, teach students some knowledge content related to labor education, and integrate the knowledge content involved in teaching with specific practical operations, so that students in technical colleges can practice in practical operation. In the process of deepening the understanding and mastery of theoretical knowledge, it is mainly manifested in the following aspects: ①The concept of labor is indifferent, and he does not participate in public labor, and does not carry out sanitary maintenance of dormitories and classrooms; ②Lack of labor...
skills. Cases of being dropped out of school due to the ability to take care of themselves; 3) The values of labor are distorted, and individual college students want to get something for nothing, they are easy to be deceived, and even commit crimes; 4) The lack of labor sentiment. The new era requires college students to have strong self-leadership, with a high degree of history With a sense of mission and a strong sense of social responsibility, they can take on the responsibility of national rejuvenation and become a professional and skilled person who meets the requirements of the times.

The significance and role of labor education at the university stage. Since the 18th National Congress of the Communist Party of China, General Secretary Xi Jinping has repeatedly elaborated on labor and labor education in the new era. labor ability and labor attitude and quality training are placed in an important position. At the 2018 National Education Conference. In recent years, my country's economy has developed rapidly. The talents that the society needs are talents with professional skills. The integration of labor education and ideological and political education can cultivate students' practical ability and innovation ability, reaching 1 The effect of +1>2 will improve the overall quality of students and cultivate more outstanding talents for the society.

The tasks of labor education and ideological and political theory courses are to cultivate people with morality and cultivate socialist talents with all-round development of morality, intelligence, physique, beauty and labor. This determines that the people-oriented principle must be followed in the design and implementation of the integration of labor education into ideological and political theory education and teaching. Be able to apply the knowledge of labor theory learned to practical operations more scientifically. Labor education in technical colleges under the background of the new era occupies a prominent position in the entire teaching work. The stable development of labor education activities can guide students to participate in practical activities with a more positive attitude. Labor is the most noble, labor is the greatest, and labor is The most beautiful concept. "On September 10, 2018, at the National Education Conference, General Secretary Xi Jinping emphasized: "We must strive to build an education system that comprehensively cultivates morality, intelligence, physique, aesthetics, and labor, and form a higher-level talent training system." From the perspective of student groups, in the process of theoretical study and practical training, cultivating students' good study habits will play a key role in their future study and life.

Good study habits will not only play a role in a certain area. In fact, in the decades of life, if a person wants to be successful, which one leaves the labor? Study, life, scientific research, invention, creation, etc. are all inseparably related to labor. Think about it carefully, the daily life of eating, drinking and lhasa. Most teachers express the content of the text in the classroom, which makes the students feel that the classroom is too boring and boring, and gradually kills the interest and enthusiasm of the students. Modern society is an information society. With the development of the times and the advancement of science and technology, the application of the Internet in learning is becoming more and more extensive. Therefore, in the process of teaching labor knowledge... Embodiing the subjectivity of people in education is not only a requirement for the integration of the two, but also an educational concept for curriculum development in the new era. Paying attention to human development is the foundation of ideological and political theory education, and it is also the value of labor education.

In the process of designing labor education courses in technical colleges at this stage, the knowledge content of many teaching materials is not novel enough, and outdated theoretical knowledge is still used. Such traditional educational theoretical knowledge is divorced from the actual situation at the current stage and cannot meet the needs of the current stage. The needs of students to learn and grow, the incorporation of such outdated teaching knowledge hinders the healthy development of labor education to a certain extent. It is believed that labor is not shameful, and labor can enable people to gain the ability to support themselves and become free people. The American educator John Dewey proposed "learning by doing, learning by doing", which is still an important means of integrating labor education into the entire educational process in vocational education. The Soviet Union's Sukhomlinovsky began to link labor education with moral education, intellectual education and aesthetic education. In labor education, teachers should incorporate self-leadership into the entire evaluation system, and establish and improve students' comprehensive quality evaluation standards. From the perspective of contemporary college students themselves, only by gradually enhancing their personal qualities, improving their personal abilities, and strengthening their autonomy in handling affairs, can they easily face and deal with the difficulties and challenges brought by various aspects at all times.

Teachers should not reject labor education, but should further strengthen their own labor awareness and concept of labor, and fundamentally allow labor education in the new era to take root. As pointed out by scholars: "For local applied undergraduate colleges, labor education is not only a means to promote the comprehensive development of education. In the process of work, we must abide by the law, abide by professional ethics, etc., so that we can improve in the classroom. Students' overall quality, cultivate students' good quality and concept.

The school can also hold some speeches or reports on ideology, politics and labor spirit, and project activities such as social practice, internship training, production labor and other project activities should be able to "strengthen students' Marxist labor concept education, improve students' law-abiding, Integrity of labor awareness, cultivate students' ability to work creatively", and actively practice the core socialist values. First, in the actual ideological and political teaching process, the core position of labor education is ignored, and many technical colleges have not produced labor education. Accurate and objective understanding, without combining the specific teaching practice with the actual life situation of students in technical colleges and universities at this stage, and relying on the limited teaching time of the classroom in the teaching process. In 1955, the state issued relevant education policies to combine moral Sports, beauty and labor are tied together, and the educational concept of "five educations simultaneously" has been formally proposed. However, during the "Cultural Revolution", labor education became a tool for stage struggle and was endowed with too much political significance.

Learning itself is a kind of labor, and teachers should let students realize this and have a correct attitude. Therefore, labor education not only cultivates students' labor ability, but also improves students' technical literacy. In the new era, the integration of higher vocational labor education and practical training teaching should focus on the following aspects. In the first step, teachers should study the teaching materials deeply, design the relevant content of labor in the teaching materials according to the actual situation of the students, and closely combine the labor education materials with the education of
English majors, so as to promote the integration of English majors teaching and labor education.

Let the students deeply understand the meaning behind the spirit of labor, and also invite some outstanding local people to give speeches, so as to further improve their ideological and moral level, and cultivate the outstanding spirit of students who are not afraid of hard work and hard work. Make students realize that labor education is the era requirement of cultivating new talents in the new era, so as to establish the goal of "equal emphasis on five education" and the basic awareness of respecting and loving labor.

To enable students to establish lofty ideals and beliefs in the spirit of learning from the ancestors who are not afraid of difficulties, hard work, and perseverance. Influenced by the traditional teaching model, the current labor education and practical teaching in the new era cannot be closely linked. At this stage, the teaching methods adopted by colleges and universities are relatively backward and cannot keep up with the development of the teaching era. Affected by the traditional teaching mode, the current labor education cannot be closely linked with the practical teaching in the new era.

Affected by the traditional teaching mode, the current labor education cannot be closely linked with the practical teaching in the new era. Poetry is like mowing the grass for the poet. If the teacher can fully realize this when preparing lessons, the classroom can naturally guide the students to obtain the above correct understanding, and then form this understanding: life requires down-to-earth labor to achieve success and happiness.

CONCLUSION

In summary, higher vocational colleges should conduct in-depth research on the teaching content, teaching methods and methods of labor education in practical training courses, so that students can continuously deepen their understanding of professional knowledge in professional practice, further grasp professional skills, and cultivate technological innovation. And the ideology of skills reform, and then improve labor skills and comprehensive literacy. To further understand the new stage of ideological and political education in the process of specific practice, and then formulate more and more beneficial labor education methods, improve the comprehensive development ability of students in technical colleges and universities, and cultivate more and better pillars for the country, talent. As an important part of the vocational education system, labor education in the new era mainly aims at the problems that arise in the study and life of contemporary higher vocational students, and further sublimates the labor education of students.
